Software Engineer | Software Designing & Architecture | AWS 2x
Certified | GCP PCA Certified | CKAD | Author
Gurgaon, Haryana, India

Summary

As a technically-inclined professional with over a decade of experience, I possess a unique combination of analytical acumen and the ability to deliver valuable insights through the utilization of advanced data-driven methods and data analytics. I have a proven track record of success in providing senior leadership with support for innovation and data-driven decision-making. I have also demonstrated my ability to establish new IT functions through technical and strategic leadership guided by an organization's vision and mission values.

I possess a proven aptitude for selecting appropriate machine learning algorithms and statistical methods to achieve actionable insights, thereby improving the decision-making capabilities of various organizations. My extensive accomplishments are built on a strong foundation in areas such as version control, cloud usage, backend service development, front-end work, and mobile application development.

Throughout my career, I have gained invaluable experience in transforming business requirements into technology solutions by designing, implementing, and installing software solutions and developing high-quality software designs and architecture. I have hands-on experience in conceptualizing and establishing various tools and applications by producing efficient code, conducting systems analysis to improve operations, and automating tasks through the use of appropriate tools and scripting.

I possess extensive experience in designing and developing mobile applications that positively impact the customers' health worldwide. I am renowned for providing actionable insights and business recommendations through collaboration with stakeholders, utilizing data analytics to focus on key business metrics. I have a track record of providing actionable insights and strategic direction

to organizations. My expertise includes data-driven solutions, data cleaning and analytics, and understanding of Data Science practices. I have a strong ability to think strategically, analyze and communicate effectively, and work well in a team. Contact me at ipreencekmr@gmail.com for more information.

Experience

IBM

Senior System Analyst

January 2022 - Present (4 years 2 months)

Gurugram, Haryana, India

As a Team Lead, my responsibilities encompass progress reporting, development work, mentoring junior team members, conducting code reviews, and unit testing. The technologies I am proficient in include React, Jest, Enzyme, Parrot Middleware API mocking, Redux, Micro Front End Architecture, Docker, Jenkins, Git, GitHub and GitHub Hooks, Lint, Analytics, A11y test, and Browser Testing, among others.

mCURA

5 years 4 months

Sr. Software Engineer

June 2017 - January 2022 (4 years 8 months)

Gurugram, Haryana, India

As a Senior Software Engineer, I am currently accountable for implementing a centralized point of communication and an optimized design pattern for our websites and facilitating cloud operations by implementing websites for both consumers and hospitals. My responsibilities in this capacity include playing a vital role in the development and implementation of React and JS-based websites and interactive portals for hospitals. Furthermore, I provide technical leadership, establish best practices for integration and application development and testing (both unit and systems), mentor and assist team members, lead the development, selection, tailoring and deployment of processes, tools, and metrics. In addition, I manage the development of code and integration of complex software components into a fully functional software system, troubleshoot and debug to optimize performance and support continuous improvement by investigating alternatives and new technologies, and presenting them for architectural review. Additionally, I identify, prioritize

and execute tasks in the software development life cycle, utilizing industry-accepted testing methods to troubleshoot flaws.

Sr. iOS Developer

October 2016 - June 2017 (9 months)

Gurugram, Haryana, India

As a Senior iOS Developer, my job duties include being instrumental in fulfilling application requirements through an in-depth understanding of SQLite and Push Notification. I played a pivotal role in the transformation and enhancement of third-party frameworks such as Twilio Video Framework, Razor Pay, and Paytm payment gateway. I also demonstrated exceptional proficiency in designing, implementing, unit testing, and version controlling iOS apps for release on App Stores. Additionally, I facilitated the needs of doctors and hospital staff by creating 1MedKey, Smart-OPD, and EMR apps. I ensured the quality and performance of the application met specifications, and identified and resolved potential bottlenecks. I also proactively fixed application bugs prior to final release, successfully published the application on App Store, adroitly maintained the code and atomization of the application, and designed and implemented updates. Furthermore, I foster a culture of inclusivity and discipline in software engineering practices to deliver business value guided by data.

Cyberlinks Technologies Pvt. Ltd., Gurgaon

iOS Developer

January 2013 - October 2016 (3 years 10 months)

Gurgaon, India

As an iOS Developer, I was held accountable for enhancing the optimization and new features for preserving existing iOS applications. I also employed AllDox and MunchAdo on AppStore through in-depth industry knowledge and exposure. In addition, I was responsible for managing a wide range of activities such as designing and building advanced applications for the iOS platform, coordinating the defining, designing and shipping of new features, and continuously discovering, evaluating and implementing new technologies to maximize development efficiency.

During my tenure, I constantly enhanced and acquired comprehensive domain expertise by working with restaurant-based apps. I also carried out unit-testing of code for robustness, including edge cases, usability, and general reliability.

Daffodil Software Ltd.

Associate IT

June 2011 - January 2013 (1 year 8 months)

Hisar Area, India

As an Associate IT, I was responsible for deploying PhoneGap Framework and utilizing my academic knowledge of HTML and CSS to develop a cross-platform mobile application. I also identified, researched, resolved and responded to a high volume of simple to moderately complex issues. Additionally, I was engaged in developing and executing strategic plans to optimize the use of information technology in support of business objectives with senior management.

During my tenure, I also provided support during the SDLC process by designing the internal website for agents and management. I also assisted in resolving support issues in real-time, with the aim of decreasing downtime and achieving high levels of satisfaction.

Education

Liverpool John Moores University

Master of Science - MS, Artificial Intelligence and Machine Learning · (June 2021 - June 2023)

Indian Institute of Technology, Madras

Advanced Certification in Machine Learning and Cloud, Machine Learning and Cloud · (September 2021 - July 2022)

Great Lakes Institute of Management

Postgraduate Program, Machine Learning · (February 2019 - September 2019)

Punjab Technical University

Bachelor's Degree, Information Technology · (2012 - 2013)

Seth Jai Parkash Polytechnic

Diploma of Education, Computer Science · (2008 - 2011)
